

Paradigm C++ Professional Real:

- The Paradigm C++ Professional Real package is a complete Integrated Development Environment for x86 real mode targets. This package provides the ability to compile, assemble, link, locate and debug an embedded application for a target within the 20-bit real mode address space (1MB). The following debugging interfaces are supported in Paradigm C++ Professional Real:

- PDREMOTE/ROM software only remote monitor debugging solution
- PromICE ROM emulator real mode support
- PROMJet ROM emulator real mode support

Optional JTAG support in real mode is available for the following:

- SC520 AMDebug JTAG real mode support (Macraigor)
- FS2 JTAG for ARC International core real mode support
- JTAG support for Genesis Microchip x86 based real mode (1MB address space) Controller Families
